

The two most common causes of kidney disease are diabetes and high blood pressure.

LET'S TALK ABOUT PREVENTING KIDNEY DISEASE

Are you willing to give feedback on a research project related to prevention of kidney disease? The investigators want to hear your thoughts on using lifestyle and medical interventions.

Community Engagement Studios are online conversations between community members and researchers. Compensation is \$45 for this meeting.

A Community Engagement Studio is a facilitated conversation between researchers and a small group of 8-10 community members who bring lived experience in a particular issue. The researcher presents their project and then asks 3-4 questions of the community members to help improve their project. The Studio is NOT research; it is community input. It lasts for about 1 ½ hours, depending on the number of questions and how talkative everyone is. It will be done by Zoom, so anyone with a phone or computer can join. Contact Kris Miller with questions: krismiller@virginia.edu.
